

VTC open 3DESIGN course

From Vision numeric China.

About the school

Zhongqu Vocational Training Centers (ZQVTC) has already trained about 70,000 talents since its foundation. With the big changing environment in Taiwan, 'vocational training' is facing serious competition and challenges. But the ZQVTC said they have been well enough prepared. They adjusted the working team and set up as a goal: "to be a customer-oriented team, with positive response capabilities and a sense of mission". "To emphasize innovation and change, to lower the unemployment rate" as a duty and "to promote life-long learning, to encourage staff self-transcendence and establish a common development direction and dream" as a target.

The training teacher, Miss Wu Xiuhua, devoted in 1996 into jewelry design field in order to cope with market demand for creative professions. Jewellery were designed by hand sketching and manufactured by handwork before. It's time-consuming and inconvenience. Teacher Wu said:"the powerful functions of 3DESIGN such as stone, settings, sweep... can inspired designer's imagination at the initial step. They can freely do any modification at any time. The 3D creation environment improves design quality. It enables the beginner to master the skill more quickly."

About the course

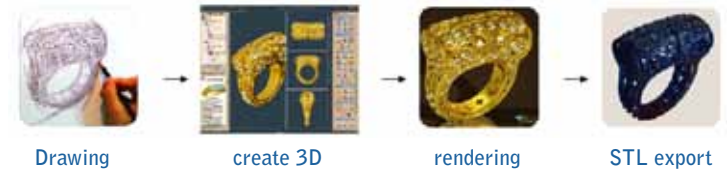

"3DESIGN software can export .stl file to RP machine directly. It avoids the misunderstanding between the designer and the maker, and shortens the machining time. Beyond the wonderful functions for creating solids, the rendering module gives us a good way to present our product to customer with beautiful images".

Teacher Wu figures out:"Previously, designers had to draw different plans at different angles in order to tell customers what their ideas looked like. But now, 3DESIGN enables us to generate any kind of view as BMP.JPG images. Our clients can use them easily. 3DESIGN also can create 3D movies or flash, it makes the communication more active. 3DESIGN software is easy to learn. It decreases your learning curve thanks to intuitive and easy-to-use interface and functions. This is one of the important reasons for choosing 3DESIGN as our jewellery design software."

The parent company of 3DESIGN, Vision Numeric, is very positive in training talents for the Taiwanese jewellery industry. 3Design cooperated with Piovision Company and provided preferential prices for school training center.
