

C.A. Treble (London) Ltd

C.A. Treble Ltd is a company of:
Manufacturers of Fine Diamond and Gem Set Jewellery.

They are based in the jewellery quarter in London in Hatton Garden.

In the jewellery field for 20 years **David Slingsby**, Managing Director and **David White**, Designer, are the two managers of Treble company. They create collections for other companies and for big shops and realise everything at Treble's. The associates  for almost one year now.

For them working with a CAD program is more accurate and allows saving time. They think 3DESIGN is really user-friendly but above all offers jewellery dedicated features.

C.A. Treble often creates ranges from one design that they decline in a variety of shapes. Therefore:

“The “resize” function is very accurate and fast for scaling tasks. We can create a whole set from ring, pendant, bracelet... It’s so useful.” declares David Slingsby.

Usually when they start a design with 3DESIGN they start from nothing. Then while creating curves and shapes they use the **duplication**, the **mirror** and the **sweeping functions** a lot.

“We also appreciate the stones library and enrich it regularly so that we can re-use our creations easily.”

Like all 3DESIGN users, they are fully sensible of the **Parametric Construction Tree** which is a real asset of the program. In general, David S. and David W. find 3DESIGN really practical thanks to its **environment of work** as you can see in a **realistic view** what you are designing.

“It’s getting exciting when you are creating parts as you can view them in real time! You can work so fast; as far as I’m concerned I realize 30 pieces a month thanks to 3DESIGN!” says David White – CAD Manager.
