

3Design V13.201

Bug fixes:

Sweeping wizard:

- Fix visibility of mirror option for sections the first time a section is created.
- Fix incorrect default angles of some profiles.
- Fix reset button in sweeping wizard not refreshing the view.

Create positions:

- Fix addition of stone positions when they are far away.
- Fix errors that could occur when editing a Create positions tool.

Stability and performances:

- Fix view disappearance on macOS when interacting with the 3D scene (pan, right click, etc).
- Fix the opening of 3Design sometimes not loading tool bench or welcome page.
- Fix crash occurring with Symmetrical twist.
- Fix freezes that could occur when loading some files.
- Fix freezes that could occur when opening a file through double click in file browser.
- Fix Conversion to polygon hanging during edition.
- Fix slowness during the first minute after launch on macOS.

Miscellaneous:

- Fix visibility of Extract curves with topological display enabled.
- Fix automatic save of non-saved files not appearing in temp folder.
- Fix result of multi pipe in braid mode.
- Fix update of stone positions with Variable channel and ring size.
- Fix bloom effect in Technical drawing.
- Fix edition of stone positions through double click in 3D view.
- Fix Screenshot to file not retaining values when "Keep values" is enabled.
- Fix selection of objects within Create an envelope tool.
- Fix Rectangle in Sketch that could sometime not be centered.
- Fix recompute of Link positions that could sometime not use the correct tangents.
